## NON GMO AND HYBRID CORN AVAILABLE

In this age of GM Traited Seed corn, we find several of the major seed corn companies promoting their GM Traits over good old-fashioned genetics. Giant Seed Company, on the other hand believes that the good old-fashioned selection and back crossing of new parent lines remains in the best interest of the American Farmer. It's their assurance of having strong high yielding seed corn hybrids for now and future generations of Farmers.

Non GMO  
Corn Available

Giant Seed Company focuses on solid specifically adapted parent lines to produce only the best hybrid seed corn for its customers. Wayne Carpenter, CEO of Giant Seed Company, says "Many companies produce test tube corn hybrids that work only under ideal conditions, while Giant Seed Company produces hybrids with the distinct ability to produce top yields on varying soil types and less than ideal growing conditions". Mr. Carpenter also said, "It does

not take a rocket scientist to figure out that the American Farmer works with varying soil types and varying weather conditions and not always ideal growing conditions. Its their pure enthusiasm to farm and their sheer ingenuity and the utilization of Giant Seed Company seed corn hybrids that they are able to produce great yielding crops on all of their acres."

Mr. Carpenter also said, "It does not take a rocket scientist to figure out that the American Farmer works with varying soil types and varying weather conditions and not always ideal growing conditions"

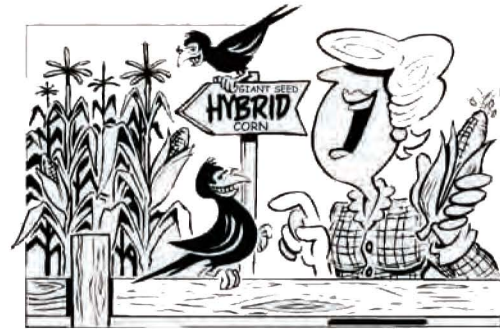

Giant Seed Company strongly believes that solid parent line development first and foremost and GM Traits secondly. More than one of the Major seed companies push, and promote, and intimidate their dealers and customers into buying their version of GM traits; Even going so far as to claim that GM Traits are the only thing that's going to save American Agriculture. The real basic truth to GM traits is that the Glyphosate tolerant trait is still the most important Trait utilized by the American Farmer today.

Did you know that stacked trait seed corn hybrids

don't have a single bushel more yield kick than a Non-GM Trait hybrid of the same parent line pedigree and sometimes even less yield.

Many American Farmers today are waking up to the real truth. And the real truth is that many major seed companies only want to sell you their GM Traits at huge, huge profits to themselves. They could really care less about good solid regionally adapted, soil adapted and climate adapted hybrids for your farm and the way you farm. Their single purpose goal is to empty your wallet at planting time with GM Traits that sometimes just are not even needed.

Giant Seed Company, on the other hand strongly believes in the solid old-fashioned selection and backcross method of plant breeding to find only the very best parent lines that specifically fit your soil, climate and farming practices. We start with Solid parent lines to produce seed corn hybrids that farmers can take to each and ever acre on

their farm with confidence. They know Giant Seed Corn Hybrids have the agronomic genetic backbone to keep on standing and keep on yielding great yields from every acre, from every field. Then, and only then, does Giant Seed Company backcross one or more of the GM Glyphosate, Bt, Rootworm, and Drought Tolerance Traits into their Seed Corn Hybrids.

Giant Seed Company strongly believes that if you give the American Farmer solid agronomic background genetics, they can produce profitable and high yielding crops. It starts with the seed.

**Giant Seed Company: Genetics First  
GMO, Traits second.**

**Our best Wishes to each of our Dealers and Customers for an outstanding crop production year.**
